

Client Information

Name : LONG QIANG _____

Sex : Male _Date of birth : 22/01/1996 _Age : 27 _Years

H.N. : _____

VN : 269 _____

Nationality : CHINESE _____

Hospital : _____

Physician : _____

Specimen Information

Collection date : 27/01/2023 16:00 _____

Receive date : 27/01/2023 18:00 _____

Order Number : OR230127M8X0341

Specimen type : Nasopharyngeal swab & Throat swab _____

Company : MedConsult Clinic _____

Passport/ID. NO : EH9997241 _____

SAT CODE : Y568 _____

Genetic Analysis of COVID-19 (SARS-CoV-2) Report

CODE	METHOD	RESULT
# COVID-19 (SARS-CoV-2)	RT- PCR	Not detected

Comment / Suggestion

TEST DESCRIPTION : The SARS-CoV-2 in this test targets 3 genes of virus genome (ORF1ab, N and E gene). Detection of a SARS-CoV-2 gene using reverse transcription RT-PCR (Real-Time PCR). Limit of detection : 200 Copies/mL, Cut off : 40 Cycle Threshold (CT)

REPORTED BY

Wuttichai Mangchantuek (MT.9869)

APPROVED BY

Sarawut Khittthuk (MT.11514)

Reported date : 27/01/2023 22:00

Approved date: 27/01/2023 22:00

----- END OF REPORT -----

ISO 15189 : 2012 Accredited

Things to know

- ☒ The test results confirm this sample only. Does not include samples sent before or after this sample.
- ☒ In the event that the results is **Not detected** of COVID-19 (SARS-CoV-2) infection from this examination does not guarantee that the client is not infected Or will not detect the infection in the future. This could be caused by many reasons such as the quantity of virus at the time of sampling was less than the reagents were able to detect or due to the ineffective sampling process.
- ☒ The first examination was not detected. Can give a different result next time. Due to the increased number of virus or having been exposed to the infection after the previous examination

Things to do

- ☒ In the case of COVID-19 (SARS-CoV-2) Test results is **Detected**, the service recipient see a doctor for urgent treatment.
- ☒ In the case of a COVID-19 test (SARS-CoV-2) test is **Not detected** but still had fever, cough, shortness of breath. Should remain in the residence for at least 14 days, but if symptoms worsen able to be tested again to confirm.
- ☒ In case of unsure whether there is an infection avoid being unnecessarily in public or crowded places. Refrain from sharing things with others. Wear a surgical mask to prevent accidental transmission
- ☒ When going to public places, use personal protective equipment such as a mask and wash your hands frequently to prevent accidental infection.
